

VIDEOCONFERENCING

Zayo Managed Services' videoconferencing service takes your communications to the next level – giving you many conferencing options for scheduling and conducting the videoconferencing solution that meets your organization's needs. Zayo does this over a secure, Quality of Service (QoS) packet network. Zayo's network uses multiple technologies to enable QoS, such as DiffServ, MPLS and queuing, to ensure that all of your video communications traffic is delivered to the appropriate destination, with the most time-sensitive packets traveling first-class.

With unlimited On-Net videoconferencing, your business can:

- Reduce travel time and expenses, allowing your employees to concentrate on growing your business
- Increase collaboration with face-to-face meetings – intrabuilding, intracity, or beyond
- Perform remote interviews

Zayo's videoconferencing solutions offer the following available features:

- On-Net point-to-point videoconferencing to any site with no conferencing fee
- Ability to bridge to legacy ISDN based video solutions
- Multi-point On-Net video bridging (3 or more sites)

Multi-point Bridging Features:

- All locations on the videoconference view the site that is currently speaking
- Simultaneously view as many as nine sites on your video screen
- Sites dialing in at different transmission rates can connect to a videoconference
- Bridge audio-only users into your videoconference

You also can choose from several optional features:

- Zayo Operators are available to monitor and assist your conference call
- Zayo Operators can dial out to each ISDN video location within your conference
